Thank for following up on this with Jill. I don't see why ATSDR shouldn't get this data.

▼ Charles Nace---03/14/2012 04:35:10 PM---All, I just got off of the phone with ATSDR and wanted to share what we discussed.

Subject: Cabo Rojo

All,

I just got off of the phone with ATSDR and wanted to share what we discussed.

1. They would appreciate receiving the final data, as well as figures that show where the samples were located, as soon as possible. It did come out that they have received the preliminary data already, although not the figures showing where the samples were located. I did not ask how they got the data though.
2. They will produce another health consultation based on the indoor air samples and they will consider the new EPA toxicity value in their evaluation. I believe their use of the new PCE toxicity value provides them with a cancer value for indoor air of 3.8 ug/m³. The good news is that all of the Headstart indoor air data is below this value. Three of the print shop samples are above this value though. We did discuss this a bit and they were relieved that the values above 3.8 were all in the print shop.
3. They are still planning on having a public availability session in a month but would like to be updated on what we plan to share next week so that we are giving a similar message, or at least understand if there is going to be a different message.
4. Jill will be out of the office on Friday, so if possible, it would be good to get her the information, assuming it is available for release, later today or early tomorrow.

Please let me know if you have any questions.

Chuck
